

## **ConvaTec Expands Unomedical Manufacturing Technology Partnership with Medtronic Diabetes to Meet Growing Demand**

- *Advanced technology and production transfer deepens companies' long-standing partnership within diabetes care*
- *Dedicated to advancing new technologies for continuous insulin infusion*

**READING, UNITED KINGDOM (30 March 2017)** — ConvaTec Group Plc (“ConvaTec”), a leading global medical products and technologies company, today announced an expansion of its manufacturing technology platform for the insulin pump therapy business at Medtronic. With this expansion, ConvaTec’s Unomedical subsidiary is increasing its production capabilities to sustain the range of infusion sets and insulin pump therapy solutions offered by the Diabetes Group at Medtronic.

The arrangement further deepens the companies’ long-standing partnership within diabetes care and their shared commitment to meeting the growing demand for insulin pump therapy among people with diabetes. An estimated 700,000 people worldwide, predominantly with type 1 diabetes, depend on insulin pump therapy.<sup>1</sup>

ConvaTec’s Unomedical subsidiary develops, produces and supplies to Medtronic a range of disposable infusion sets, including MiniMed® QuickSet®, MiniMed Silhouette®, MiniMed Sure-T® and the MiniMed Mio® family, used in insulin pump therapy. An infusion set is a critical component of an insulin pump system, consisting of a small tube called a cannula, typically inserted under the skin in the abdominal area, which delivers insulin from an insulin pump to the body of a person with diabetes.

“We are excited to expand our long-standing partnership with Medtronic, sharing advanced technologies and complementary competencies to ensure that we can meet the needs of the increasing number of people with diabetes who are depending on insulin pump therapy,” said John M. Lindskog, President, Infusion Devices, ConvaTec. “Together, we have a great foundation for offering the best solutions for people with diabetes, giving them more control and freedom in their lives.”

“We have a trusted partner in Unomedical with significant manufacturing know-how and a long track record of delivering reliable, high quality consumable components as we continue to expand our insulin pump business around the world,” added Bogdan Madzar, Vice President of R&D and Global Consumables for Diabetes Service and Solutions at Medtronic. “Together, we are advancing innovations that expand the options for people using insulin pumps as we seek to both improve outcomes and satisfy lifestyle needs so that people with diabetes can enjoy greater freedom and better health.”

Since 1997, Unomedical and Medtronic have worked in collaboration to improve the lives of people with diabetes using insulin pump therapy. As the partnership enters its third decade, the two companies are working together to develop the next generation of solutions for continuous insulin infusion
