

KEY

- Site Boundary
- 10 and 20 km Buffer

Cumulative Assessment Locations

- Operational
- Area where operational windfarms are theoretically visible
- Area where the turbine blade tips would be theoretically visible
- Area where a turbine blade and an operational turbine would be theoretically visible

Notes:

Boundaries are indicative.

The turbine locations have been modelled at a height of 150 m (to replicate blade tip height) and between 18 and 145 m (operational turbines). The ZTV runs to an extent of 45 km.

Environment Agency LiDAR DTM was used to create the model from which the ZTV was produced.

The ZTV takes into account an eye height of 2 m.
